

# Agroforestry and biodiversity

**Leon Bessert, DeFAF e.V.**

**Uni Hohenheim Goes Agroforscht  
05.12.2023, University of Hohenheim**

# Contents

- 1) Agroforestry in Germany & The work of DeFAF – German Federation for Agroforestry
- 2) Effects of Agroforestry on (agro)biodiversity
- 3) Project SEBAS – promotion of biodiversity through Agroforestry

# Agroforestry in Germany

- Legally defined within subsidy law since 2023
- Combining cultivation of agricultural goods (crops/livestock) with **cultivation of trees and shrubs**
- Different **requirements** (share of trees and shrubs of total agricultural area, certain trees are banned) **for basic subsidy**
- More **requirements for further subsidies (eco scheme, subsidy for establishing an Agroforestry system)**

See “[Themenblatt 3: AFS in der GAP 2023](#)”

# DeFAF – German Federation for Agroforestry

## Goal: Promotion of Agroforestry in Germany

- Non-profit organization founded in 2019
- Education, (first)consultancy of farmers and other stakeholders
- Networking: Farmers, scientists, policy makers
- Lobbying: communicating expertise on Agroforestry

## Working structure

- 8 thematic departments – voluntary basis
- Main office in Cottbus with currently 6 employees
- Regional groups are forming

# Activities and offers of DeFAF

The image displays three examples of DeFAF's communication materials:

- Infobrief 2/2020:** A digital newsletter from July 2020. It features a header with the DeFAF logo, a main text section with news about the association's growth and activities, and a sidebar with links to various publications.
- Fachinformationen zur Agroforstwirtschaft:** A screenshot of the DeFAF website's information page. It includes a header with the DeFAF logo and navigation menu, followed by a main content area with sections like "Handbücher, Leitfäden, Broschüren" and "Projekte und Abschlussberichte".
- Themenblatt Nr. 1: Agroforstsysteme auf Pachtflächen:** A printed brochure cover. It features the DeFAF logo, a large photo of a field with trees, and three circular inset photos showing close-up views of plants and animals. The title "AGROFORSTWIRTSCHAFT" and the subtitle "DIE KUNST. BÄUME UND LANDWIRTSCHAFT ZU VERBINDELN" are at the bottom.

- Information materials
- Digital and print
- Support and initiation of (research) projects
- Organization of events
- “Forum Agroforstsysteme” (next 2025 in Gießen)
- Education
- Agroforestry-Academy

# Current projects of DeFAF e.V.

Transfer of  
knowledge

Value creation

# General situation of Agroforestry in Germany

**Figures of the actual amount and size of Agroforestry systems (AFS) are not available!**

→ AFS can be officially registered as such since 2023, however there are obstacles to do so

→ There are no reliable figures

Attempt to monitor AFS through [agroforestry map](#) by DeFAF

→ Agroforestry farms as well as institutions and interested entities can **enter their data themselves**

→ **Entries are promoted, however only a share of AFS are included!**

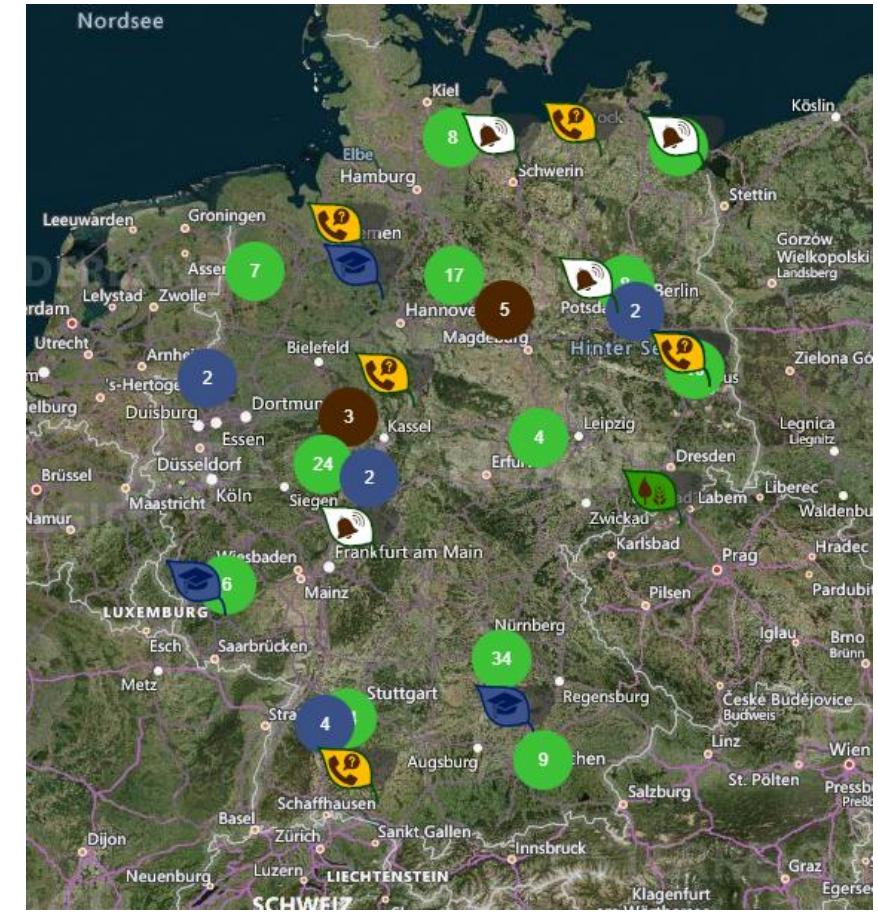

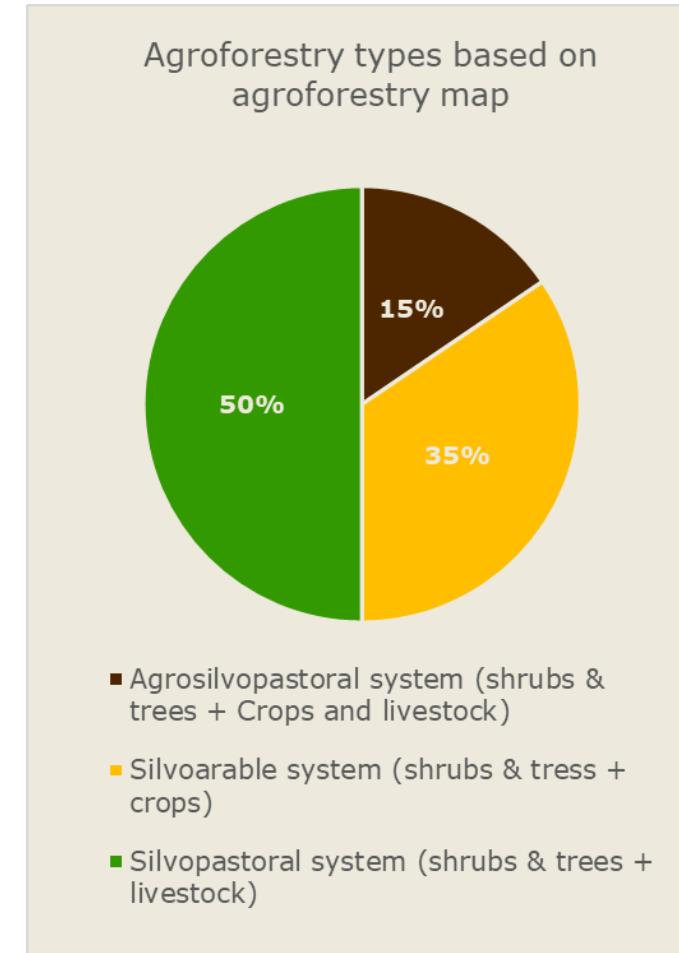

Figure 1: agroforestry map of Germany

# Data based on DeFAF Agroforestry map

- **Total AFS: 154**
- **Total area of AFS: 1164 hectares**
- **Total area of shrubs and trees in AFS: 236 hectares**
- **Average tree cover in AFS: 20%**

(November 2023)

*Figure 2: share of agroforestry types*

# Distribution of Agroforestry within Germany

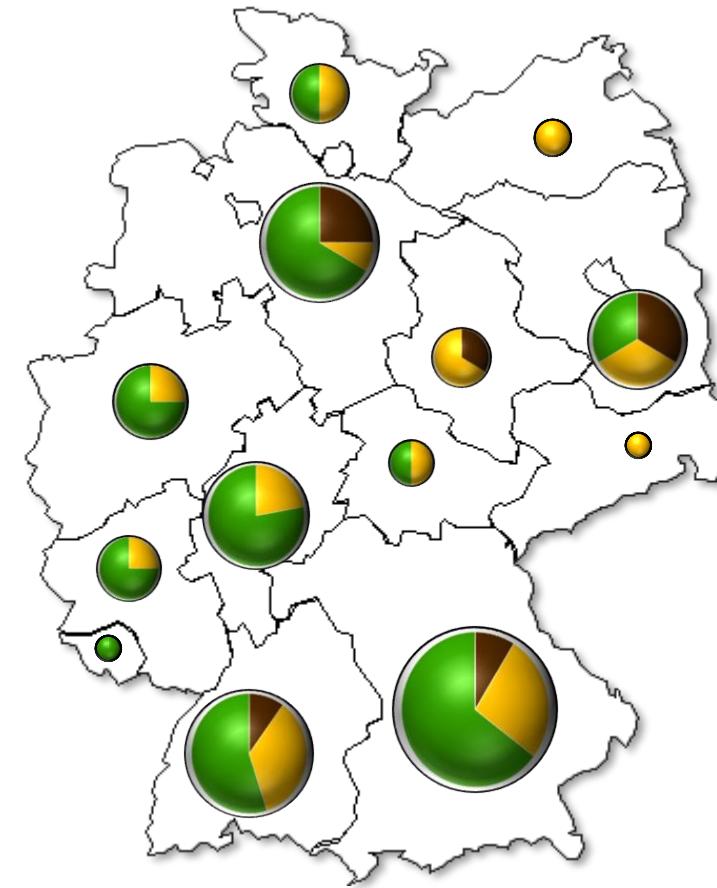

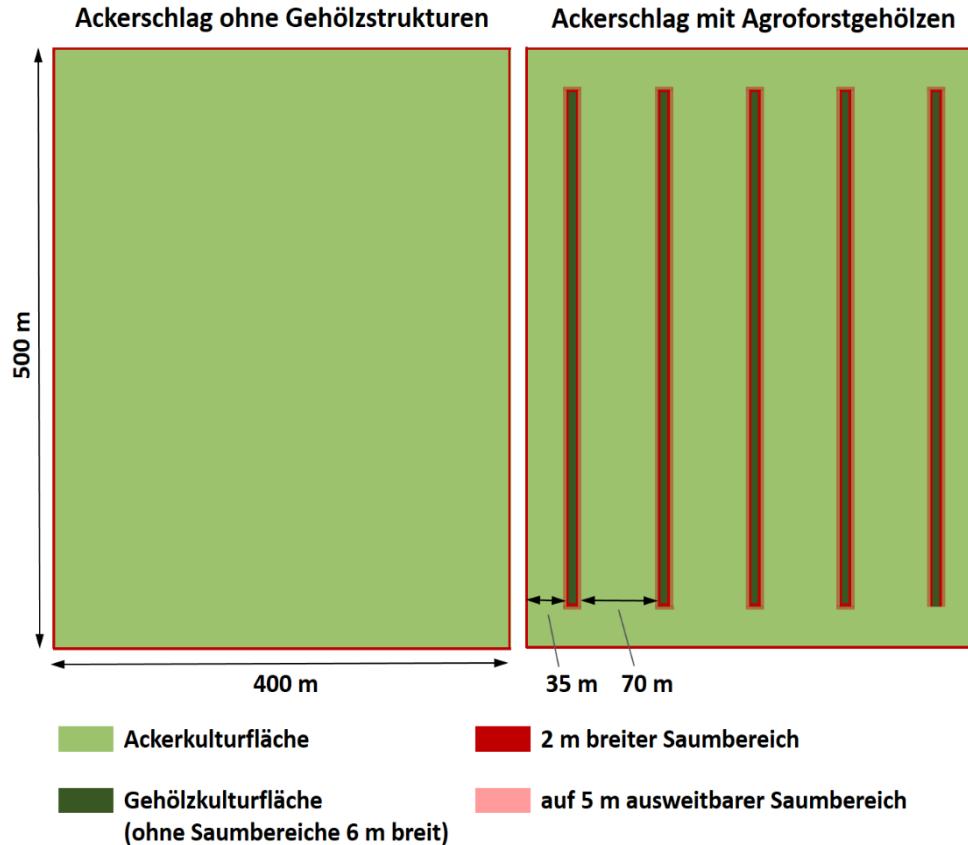

Figure 3: Distribution of AFS in different states of Germany. Size of respective figure shows relative amount of AFS

# Effects of Agroforestry on (agro)biodiversity

**Shaping diversely  
structured landscapes**

# Creating habitat for resting and development

Quelle: anlehend an Böhm (2020): Multifunktionale Landnutzung – mit Agroforstwirtschaft zu einer strukturreicheren Agrarlandschaft. Naturmagazin 1/2020, 20-21

# Creating habitat for resting and development

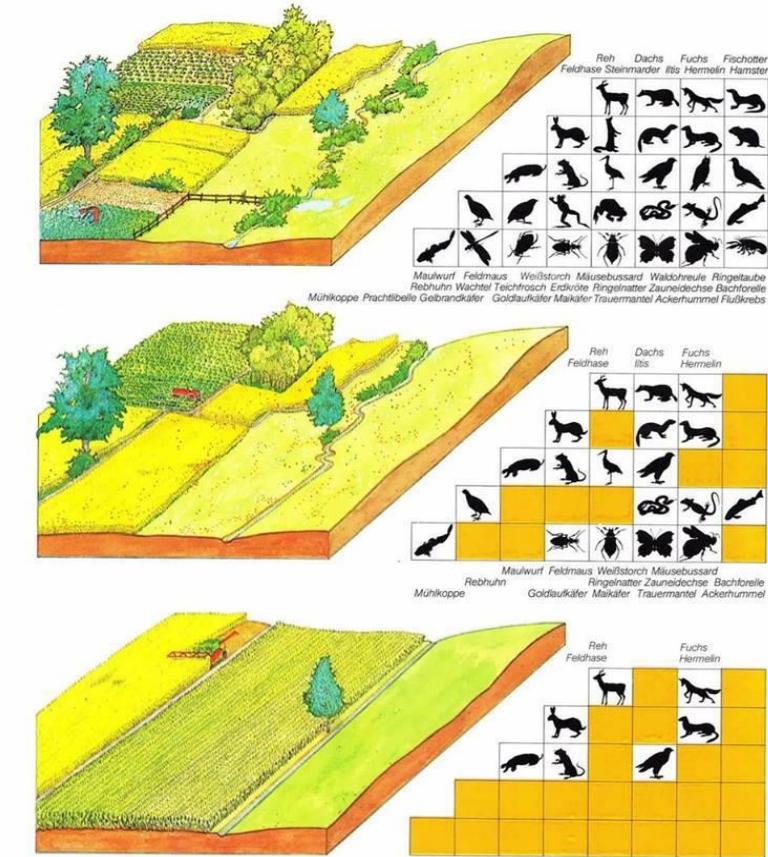

- Positive effect on animal biodiversity in tree rows due to **less disturbance**
- More Birds, but less ground beetles (Schulz et al., 2009)
- Research so far implemented in short rotation coppices (SRC): Monoculture plantation of fast growing trees
- Woody stripes provide **temporary habitat** and can **connect different habitats** (Zitzmann et al., 2022, Ehritt 2020)
- Function as **buffer zones** between agricultural fields and sensitive nature conservation areas (Strohm, 2012)

# Effects of Agroforestry on (agro)biodiversity

Diversely structured landscapes promote agrobiodiversity!

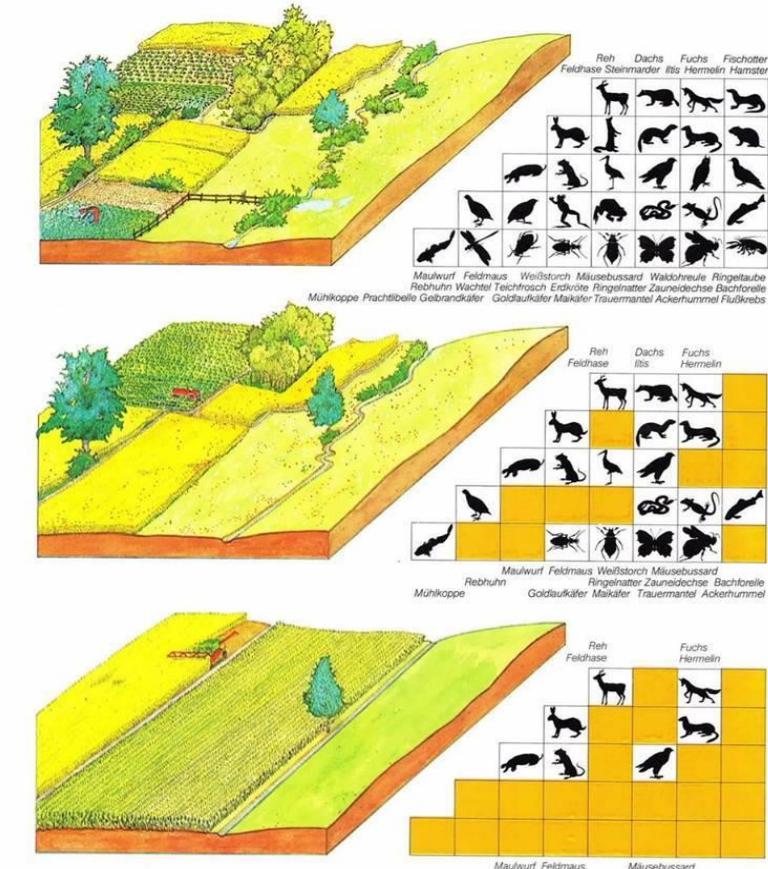

- Local biodiversity is influenced by available pool of species population in the surrounding landscape (Tscharntke et al., 2020)
- Improved landscape complexity promotes insect diversity (Marja et al., 2022)
- Trees and shrubs form this structure
- In Agroforestry systems, these structural elements can be used in agriculture und hence promote biodiversity (Hildmann et al., 2022)
- Farmers are motivated to integrate such structures within the land they are cultivating

<https://www.pulsdererde.org/wp-content/uploads/2019/02/19-09-Agrarlandschaft-mit-Artenvielfalt.jpg>

# Effects of Agroforestry on (agro)biodiversity

- Woody structures promote **bat activity** (Krings et al., 2022)
- Woody crops require **less pesticide application**
  - Reduced application of pesticides on agricultural land (Böhm & Kanzler, 2020)
- Effects differ in the respective agroforestry system!
  - **Permanence:** Short rotation system or long term production of value timber and/or fruits & nuts?
- Maximising of **ecotones** (transition area between different habitats) by integrating **fallow stripes** along the tree rows
- **Species-diversity** of woody crops (providing food for e.g. wild bees and other insects)

# Effects of Agroforestry on Soil organisms

**“Tree rows promoted the abundance of bacteria and earthworms”**

- Mainly due to tree litter input and absence of tillage
- Increased proportion of ectomycorrhizal fungi

(Vaupel et al., 2023)

Agroforestry systems alter the microbial community

- More microorganisms that digest woody biomass (Beule & Karlovsky, 2021)

**More about the effect of Agroforestry on soil from Dr. Lukas Beule, January 9<sup>th</sup>!**

# SEBAS: Förderung der biologischen Vielfalt durch Agroforstwirtschaft

(Promotion of biodiversity through Agroforestry)

Gefördert durch:

Bundesministerium  
für Umwelt, Naturschutz,  
nukleare Sicherheit  
und Verbraucherschutz

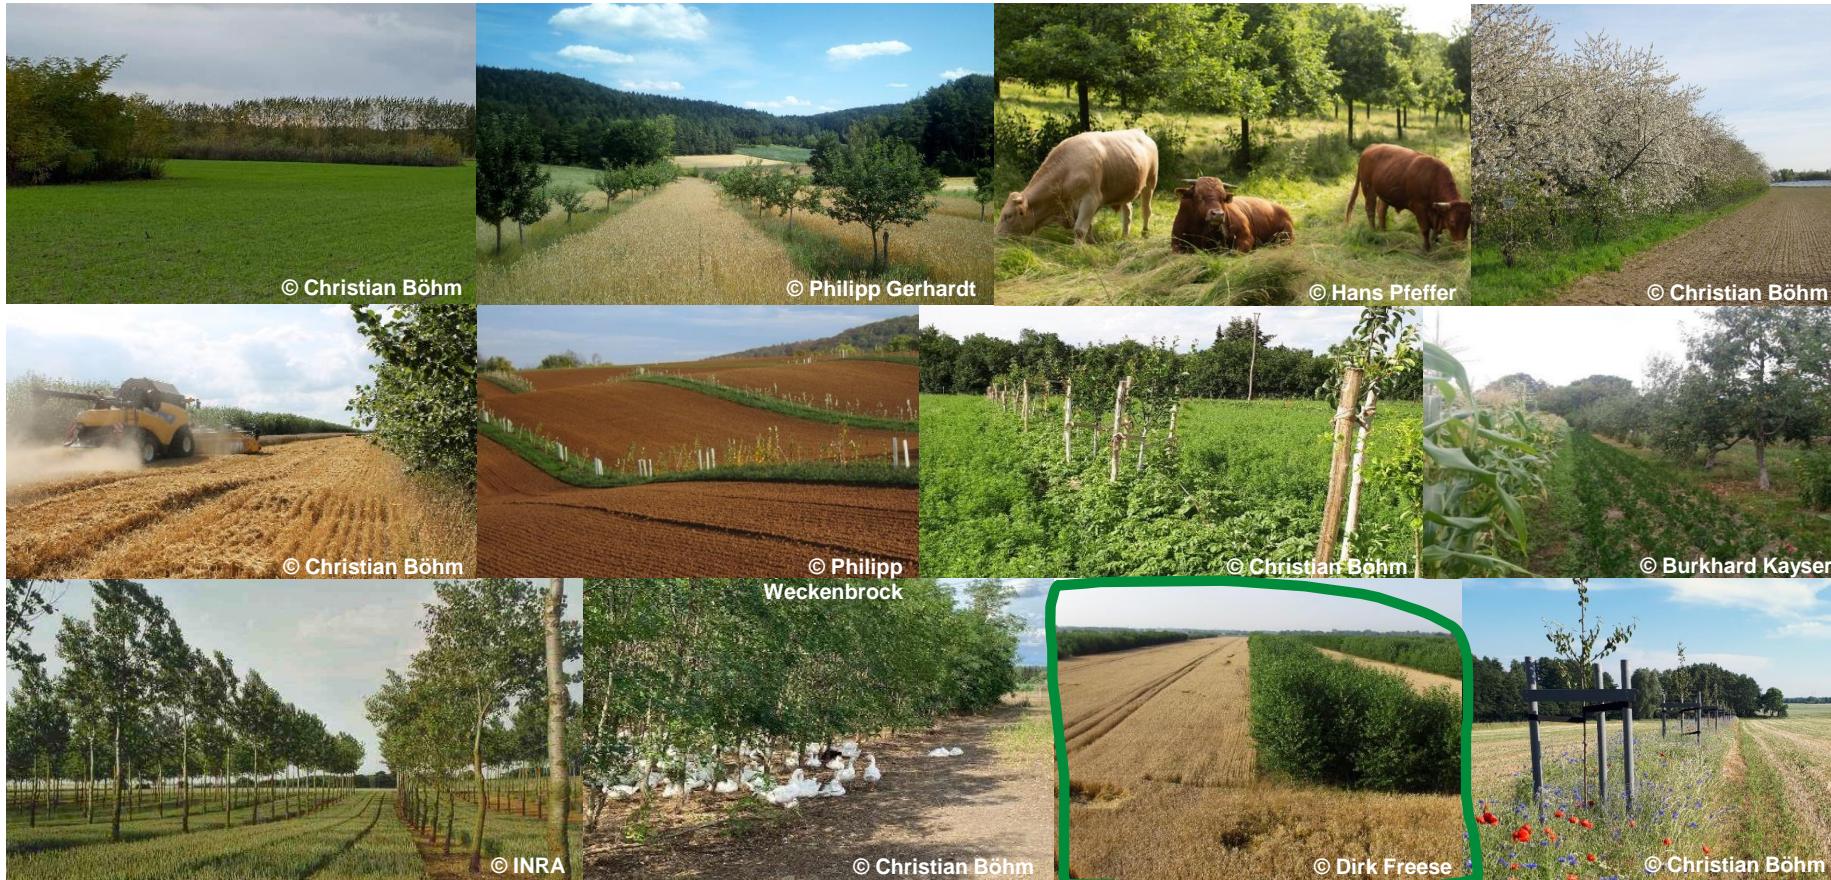

Bundesamt für  
Naturschutz

aufgrund eines Beschlusses  
des Deutschen Bundestages

# Main Research Question

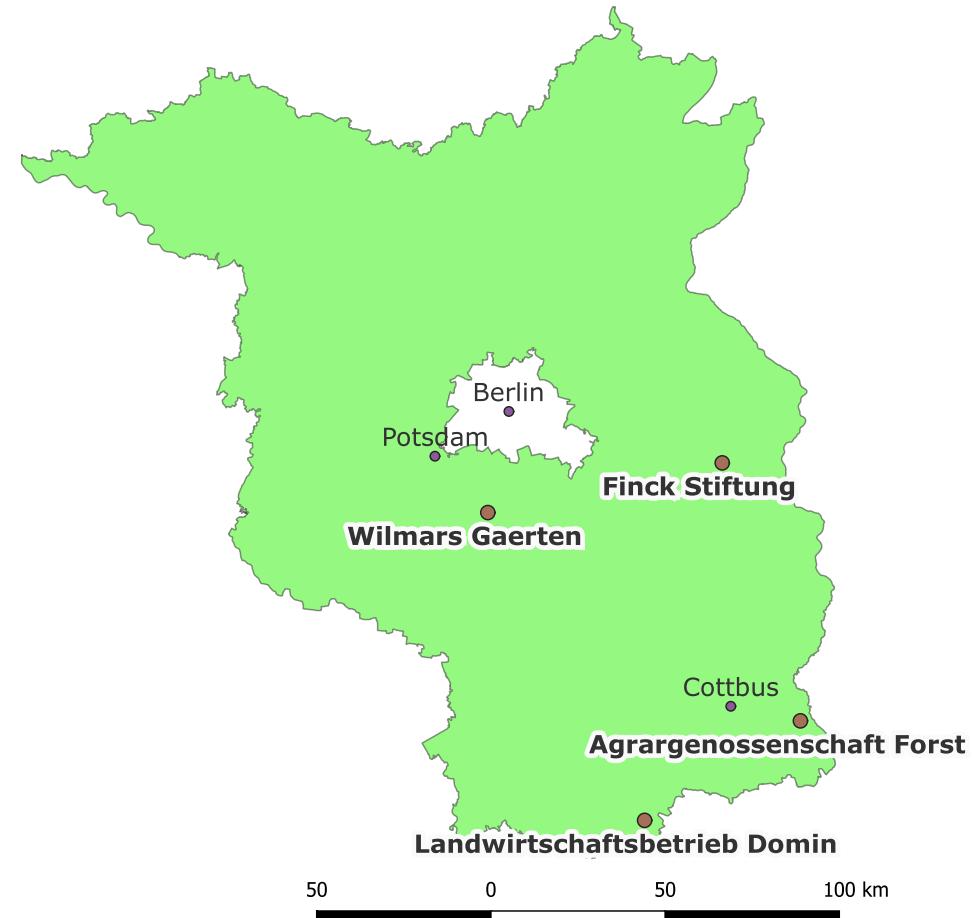

Do Agroforestry systems promote **biodiversity of insects?**

# Research design

## Research plots on 4 Agroforestry farms in Brandenburg

- Already established silvoarable Agroforestry systems
- Short-Rotation alley cropping systems for wood chip production
- Tree species: different poplar hybrids (*populus* spp.)

# Research design

## 3 Habitats

- Tree row
- Fallow stripe
- Cropland

➤ Reference: Cropland without Agroforestry system

© Liz Lethal

# Research Questions

- How do Agroforestry systems influence the **amount, abundance and spatial distribution of insects?**
- How does the influence change in **simulated drier conditions?**

# Research Question & Goals

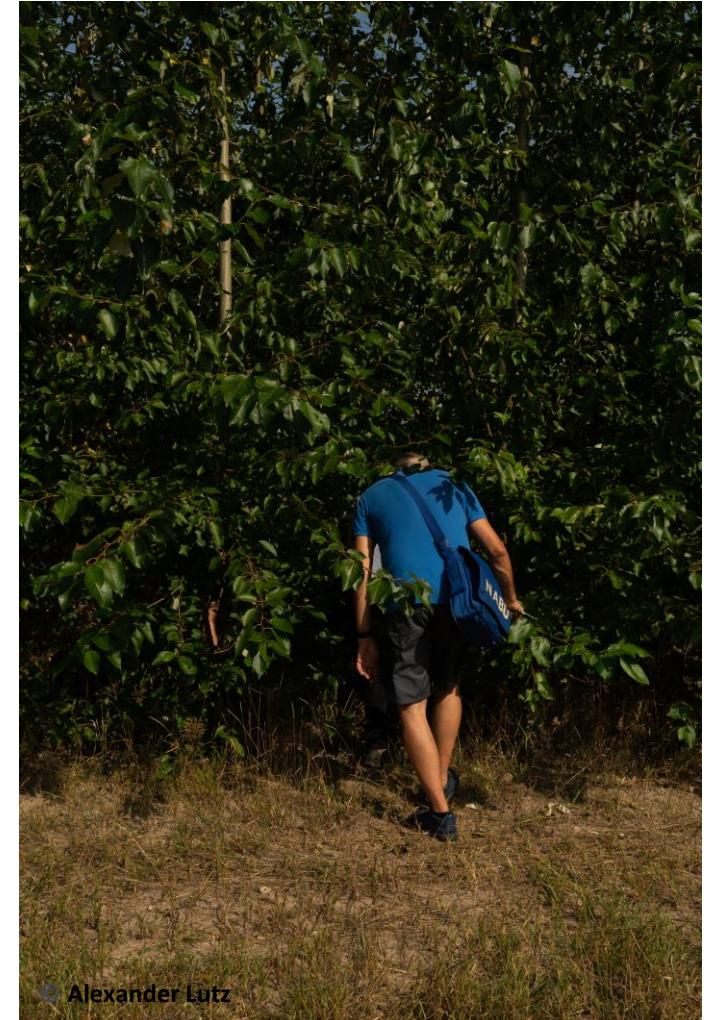

- How do Agroforestry systems influence different **ecosystem services**?
  - Pest control
  - Nutrient release
  - Pollination service
- **Transfer** of gained **knowledge** to different stakeholders
  - Farmers & Landowners
  - Policy makers
  - Public
- **Promoting** the **establishment** of **Agroforestry systems**

# Goals: Nature conservation

- Identifying **objectives of conflicts** between **Agroforestry** and **nature conservation**
- **Building bridges** between **Agroforestry** as an **agricultural production systems** and **nature conservation goals**
- Example: Agroforestry systems in **nature conservation areas** (e.g. NATURA 2000 bird conservation areas)
